Connecting the Hydraulic Hoses

FIG. 58. Clean the area around the hydraulic connections. Remove the cap (1) and plug (2) from the header and tractor connector fittings, making sure not to remove the connector O-ring. Install the plug into the cap and store in the tractor toolbox for installation if the header is removed.

Find the large header hose (3) connected to port P on the relief valve manifold. Connect this hose to the top high pressure line on the tractor. This is the pressure connection.

Find the large header hose (4) connected to port T2 on the header hydraulic manifold. Connect this hose to the bottom high pressure line on the tractor. This is the return connection.

Find the small header hose (5). Connect this hose to the center drive line on the tractor. This is the system connection.

Find the small header hose (6) connected to the left-hand rear lift cylinder. Connect this hose to the bottom line with the small white, quick coupler. This is the rear lift connection. If the quick coupler is difficult to connect, turn the header system switch ON but do not start the engine. Press the rear lift switch in the direction to lower the rear. This will reduce the pressure at the rear lift coupler on the tractor. Turn the switch off and take the key with you. Connect the rear lift hose.

IMPORTANT: When connecting the header drive hoses, do not get the rear wheel pinched at all. If neither the header drive hoses or the tractor hydraulic lines, let the tractor to rest for the minutes after connecting the header drive hoses for the first time before engaging the header.

A quick coupler M is available to make the hydraulic connection easier. Refer to the tractor Operator Manual for more information.
